## Complete Year-Round Lawn Care Kits

*TURFfection Lawn Care kits are designed to develop a care plan for your lawn using the same products we use on our very own turf farms. From managing thatch to increasing root growth & turf health, our kits include a wide variety of high-quality components that work with your soil and turf to maximize lawn health.*

## Instructions

*Apply products in order: 1 - 2 - 3. Although it is ideal to apply each product in the month specified, products can be applied in any month. If starting applications late, space applications by at least 14 days apart.*

*When spraying product, walk at a continuous pace moving your arm back and forth with sprayer covering 10-15 feet in front of you. Keep moving to ensure complete coverage. Containers are designed to cover lawns from 3,000 - 5,000 square feet. For smaller lawns, do not over-apply. Remaining product may be applied again after 14 days.*
